

A B S T R A C T

This invention relates to a liquid transporting/processing device and a liquid transporting/processing method, which transport (or move) liquid per se or substance dissolved or contained in the liquid or adsorbed or sticking to the liquid, and which perform the process of washing a flow path. Washing solution (55) is transported in one direction or back and forth along the flow path (33); thereby washing the flow path (33) that electrically controls the transportation of the liquid.
